Continuation of 11. does NOT place the application in condition for allowance because: With respect to the Applicant's argument that Bae fails to teach a x-y-z axis rotation preventing means, the Examiner disagrees. Bae teaches a 3 dimention rotational body which translates along the grooves 26 via groove 30a to specific end points. It is clear from the Figures and Specification that the Bae telephone structure does not allow movement outside of the grooves, thus preventing rotation and implicitly having a rotation prevention means.
